RE: **554-10PK2, 554-25 and 554-100 Plastic Hanger Strap**

Sioux Chief Manufacturing sells a variety of products for professional plumbing contractors to use to install and support their CTS water supply lines and DWV pipes.

For decades, Sioux Chief has been selling its 554 series plastic hanger strap for supporting plastic DWV (ABS or PVC) or to secure all types of CTS tubing (copper, PEX or CPVC). This product is made with an extruded polypropylene resin (ASTM D5857) and we have not experienced any product failures when properly installed in accordance with UPC or IPC national code requirements for supporting plastic DWV piping or CTS supply lines.

Maximum allowable load

Temperature	Load
32° to 120°F	20 lbs

Sioux Chief does not recommend using this product in extremely cold temperatures because extruded polypropylene has a tendency to fracture when repeatedly exposed to temperatures that fall below freezing.

Thank you for your interest in our products.

Sincerely,

Carol Flanagan
Product Group Director – Support Division
