Product: StickEm Up™ – DWV Pipe Support

RE: Safe Working Load when glued

Background:

Questions have come in asking if the Stick ‘Em Up DWV Pipe Support can be glued and what the safe working load would be.

Findings:

In the tests conducted, applying glue is only effectively done when the hanger is installed as a vent run stanchion in an attic. The use of primer and a sufficient amount of all-purpose glue and the glue joint allowed to cure for 48-hours while under Compression.

Summary:

When properly installed according to the steps above, the safe working load of the Stick ‘Em Up is 60-lbs.

Sincerely,

Carol Flanagan
Product Group Director – Support Division
